Memo to File:

RE: McFarland & Hullinger
Crystal Mine
ACT/045/010
Tooele County, Utah

On July 29, 1983, Division representatives Susan Linner and Tom Portle inspected the above-mentioned minesite. The purpose of the inspection was to ascertain if recent disturbance had occurred at the property.

No recent activity was evident because Getty had begun to procure Zone 6 material for use in tailing dam construction from pit development work. This material had previously been bladed into Sacramento Gulch.

Mr. Hullinger, however, did indicate in a phone conversation earlier in the week that the site was to stay open presumably in case Getty would need more fill. It had been established that the Crystal claims were under the control of McFarland & Hullinger rather than Getty through its acquisition of Mercur Dome.

All responsibility for the area clearly rests with McFarland & Hullinger.
